

WATER EDUCATION FOR SCHOOLS

Sponsored by
Woodinville Water District

Woodinville Water District offers classroom presentations and field trips for local schools to help students explore the fascinating world of water. All presentations are tailored to our region and are offered free of charge. Each class will be conducted by an experienced educator from Nature Vision, a local environmental education nonprofit organization. All programs support the Washington State K-12 Learning Standards and STEM education and are adapted to grade level.

Aquatic Insects Dip Field Experience [Grades 6-12, Field]

Students visit a local accessible water site (pond, lake, or stream) and examine and identify aquatic insects based on which are water quality indicator species. Older students may also participate in water quality tests for oxygen, pH, temperature and more. This program focuses on the importance of biodiversity within ecosystems and protecting watershed health.

Salmon Cycle [Grades 6-12]

Discover the connection between Pacific salmon, people, and the water we share. The salmon life cycle and what this keystone species requires from its ecosystem is discussed. Students will explore water quality issues and understand why healthy salmon habitat is good for Northwest ecosystems, and people, too!

Watch the Flow, Above and Below [Grades 6-12]

People need to use water wisely as it cycles through our human-built environment. Students will learn the basic infrastructure of how water flows from nature through our cities and towns and back again, and the impact of human behavior on this water system.

Watershed Dynamics (Enviroscape) [Grades 6-12]

Students will interact with a tabletop model of a typical community to learn how their everyday choices affect the water quality in our watershed. Alternative choices to prevent watershed contamination are discussed.

Watershed Field Experience [Grades 6-12, Field]

Students will visit a local lake, wetland, or pond near their school and explore it with an educator. Students will observe plants and animals in this environment, examine and identify local freshwater invertebrates, and will learn about the health of our greater watershed systems. Older students may also participate in water quality tests for oxygen, pH, temperature and more.

Drip Irrigation [Grades 6-7]

Students will explore how drip irrigation systems can help us use water more efficiently in home and school gardens. Students will experience an example of systems-thinking between natural cycles and human-built environments through interactive games and models.

Water Conservation

[Grades 6-8]

Did you know that our area receives less rainfall in the summer months than Miami, Florida? Join us for an interactive lesson that will explore what our community can do to conserve our water indoors and outdoors. Students will learn why we need to save water and what every person can do to use water wisely to help keep more water in our local water bodies for wildlife and future generations.

Watershed Ecosystems

[Grades 6-8]

We all live in a watershed, and it is up to us to keep the water that flows through it clean and plentiful. This program introduces students to their own local watershed and to the plants and animals that share this important ecosystem. Students will also learn how a healthy environment cleans water naturally, and gain insight on the impact of humans on this system. Positive human actions on the combined natural and human built environments are discussed.

Water Supply

[Grades 6-8]

Do you know where your drinking water comes from? Discover the path clean water takes from its local natural source to your faucet! Students will explore the human and natural factors that affect our water supply, and what actions they can take to keep this important natural resource pristine as our population grows.

Healthy Water, Healthy Soil

[Grades 6-8]

Through this hands-on lesson, students will gain an understanding of soil function and physical properties. Students will observe soil texture, structure, infiltration, and analyze. Students will connect soil composition with the impact of our daily water choices on the natural environment, especially how healthy soil helps water conservation efforts.

Healthy Water, Healthy Ecosystems

[Grades 9-12]

Experiment with soils from different watershed ecosystems in Washington, and develop an understanding of what each ecosystem needs to be healthy and sustainable. Conduct an analysis of plant needs and create a restoration plan that matches an appropriate soil within an ecosystem. Determine how soil pollution creates disruptions within these ecosystems.* Please note one block period or two classroom sessions are needed for this program.

SCHEDULING CONSIDERATIONS: We are available to visit your school between 7:30am and 4:00pm. Please allow one hour for each program if possible. Feel free to schedule programs back to back (10:00am, 11:00am, 12:00pm), but if possible please leave 10-15 minutes in between. Pre-registration is required. If you have any questions about our programs please do not hesitate to email info@naturerevision.org or call 425.836.2697.
